Brief Introduction

PredictionClub(hereinafter referred as PCLUB) is a decentralized PredictionMarket platform that runs on blockchain smart contracts, and innovatively joins the NFT License mechanism. Users can publish prediction products(PRD) after purchasing NFT Licenses, and invite their communities or fans to participate. The party with the correct prediction divides the funds in the pool.

The product comes with a primary distribution mechanism, all users who buy NFT License can recommend others to directly get the referral commission, all participants can get ERC-20 token rewards, and ERC-20 token is expected to be issued and listed during the World Cup in December 2022.

The project borrows the hot trend of the NFT market and points directly to the upcoming World Cup. The positioning and timing are precise, and it is a project worthy of attention. Currently PCLUB is recruiting promotion partners in South Korea, Turkey, Europe, Southeast Asia and Greater China. It is expected that Official launch on October 18, 2022 (UTC).

background and analysis

After experiencing the rotation of several major sectors such as DEFI/GAMEFI/NFT, the cryptocurrency market has entered a downturn in 2022. Especially in the second half of 2022, there is no sector or project that can clearly lead the market.

At the same time, we also see that, on the one hand, the encryption industry is still actively exploring, especially for the major upgrade of the consensus mechanism of Ethereum, various public chain ecosystems are actively welcoming the opportunities and even black swan events that erupt at this time. On the other hand, after going through the PFP stage, the LOOT stage and the boring ape stage, NFT market gradually deepened into the online and offline integration stage. And it brought a hot market of NFT/digital collections that lasted for about a year in the Chinese market, as well as by this upgraded wave of "digital property rights transactions" has actually completed the NFT education for users in China and the entire Chinese-speaking region. In 2022, with the support of the concept of the Metaverse, the NFT as a proof of profit expectations remains at a good high level.

From the perspective of the macro situation, the trend of anti-globalization, geopolitical tension, and the new crown epidemic since 2020 have seriously eroded the real economy of various countries. Ordinary people, especially the middle class, who have been seriously

affected by the downturn of the real economy, have regarded digital currency as an important store and value-adding means of assets. The demand side is accumulating strength.

Therefore, we have reason to believe that the cryptocurrency market, especially the NFT-related sector, will continue to maintain its temperature in the second half of 2022, and it is expected that new highlights will appear in combination with the 2022 World Cup. PCLUB appears in this context. It's a market rookie across the NFT sector and the PredictionMarket sector.

The PCLUB team has always maintained anonymity and has not officially announced its real information, but the timing of its entry into the market, its low-key style of doing things, rich business inclusivity, its own communication incentive mechanism, excellent token economic model design, etc. From the perspective, they should be senior practitioners in the digital industry, and are expected to become the leaders of the digital currency market in the second half of 2022.

Let's dance with the strong and share the dividends of emerging technologies, emerging markets and innovative products.

Key Elements

SLOGAN:

Predict to Earn.

Three major features::

1. Decentralization and security: Smart contracts that run entirely on a decentralized network, non-custodial. Keep your funds safe.
2. Rich prediction scenarios: Any scenario you can imagine can be expressed and rewarded here, which is a creative platform.
3. Excellent tokenomics design: It integrates the advantages of NFT market and PredictionMarket, adopts the most popular NFT operation mechanism, and fully enjoys the dividends of industry growth. It also reserves abundant room for expansion.

Promotion Policy

1. The platform's NFT sales mechanism has built-in 8% referral commission. As long as you recommend other people to buy NFT License, the referral commission will be credited to your account in real time;
2. All promotion relationships directly written to the smart contract, and the promotion relationship is permanently effective;
3. The server fee is first deducted from the platform's retention. If the retention amount is not enough, it will be deducted from the daily income. The retention after deduction is said to be returned to the NFT owners. Therefore, KOLs and channels with strong communication ability will soon be able to get decent returns;
4. If the cost of future strategic adjustment/new business expansion changes significantly, the allocation policy will be adjusted after the joint decision of DAO governance;
5. When the total sales of the platform exceeds 2M(USDT), PCLUB will start the minting of ERC20 tokens.

Risk Control Principles and Methods

1. Created by an anonymous team, very decentralized, everyone is a co-builder, not a trader. The reason for anonymity may be due to the consideration of supervision (and there is no platform profit part in the economic mechanism, which is also a mechanism to avoid supervision , PCLUB gave the share of the issued products and most of the tokens to the community. From the perspective of evading supervision, it makes us more optimistic about the growth of this project----only projects that consider long-term development will designed with regulatory considerations in mind);
3. The communities of various countries are formed by the channels themselves, which is a loose cooperation, not a whole. In principle, the platform does not provide services for Chinese users, and the server side will block IP addresses from China by default;
4. Regarding the target users, the risk tolerance and social impact of the product should be considered, and it is strictly forbidden to involve non-currency users such as school students and retirees/elderly groups;
5. It is strictly forbidden for promotion channels to touch the exchange business that is explicitly prohibited by the state, as well as the business involving legal currency;

Knowledge of performance benchmarks

After the prompt channel is launched, a direct referral commission will be obtained.

If the sales are greater than 50K USDT within 1 month, they will enter the cashback sequence.

Basic referral commission	
Referral Commission	6%
sales return	
Sales between 50K ~ 100K	40%
Sales between 100K ~ 300K	45%
Sales above 300K	50%

Note: The time starts from the first purchase. If the recommended amount in the first month does not reach the cashback sequence, but the cumulative 2-month sales exceed 300K, there is an opportunity to appeal.

Outline of Business Development

0. The communication between all channels and projects is based on the account of Telegram customer service (https://t.me/PredictionClub_Community);

1. Connect the Binance Chain wallet through Metamask, or you can enter the official website through a decentralized wallet and connect through the Binance Chain wallet in the wallet;

2. Purchase an NFT through the link sent by the customer service (the purchase fee of 200U will be reimbursed at the first dividend), or log in to the official website (<https://www.predictionclub.xyz/>), and click "LaunchAPP" in the upper right corner (<https://www.predictionclub.xyz/app/nft>). Click "Buy Now" to purchase. After purchasing, click "share" in the middle of the page to get the sharing link (this link contains your blockchain address, which is the invitation code), send the link to your own community to recommend others to buy;

3. After a friend makes a purchase through the invitation connection, you will receive a sales commission in real time, and enter the return sequence after the accumulated recommendation amount reaches the corresponding standard;

4. Use the NFT held in your hand as a certificate, open a corresponding prediction product in the Market, and invite your own users to participate, and then get a certain percentage of all user deposits as the issuance fee,

and get ERC-20 tokens according to the amount you invested distribution
of tokens;

General user participation

1. Participate in the current prediction product directly through the product interface, and the winning party will divide the funds of the other party (pool to pool);
2. All funds paid on the platform, regardless of whether they win or lose, will receive a corresponding amount of ERC20 tokens after the second phase of ERC20 token issuance, which can be sold/traded/pledged mining on the exchange, etc.;
3. Ordinary users can also buy NFT and promote it to their own network to get sales commissions. If there are enough user resources to qualify for the channel, they will also participate in the distribution of sales revenue and enter the operation sequence;

Examples of prediction products

1. Digital currency price prediction: Can Bitcoin break through 40,000 USDT by the end of 2022? / Will it exceed 15,000 USDT?
2. Digital project operation forecast: Will EOS be delisted from Huobi before the end of 2023?
3. Political predictions: Can Putin be re-elected?
4. Sports prediction (hot): In the 2022 World Cup final, can the Netherlands win the championship?

Token Issuance Information

NFT Section: Issue October 2022

NFT Token	
Name	PredictionClub License
Symbol	PCLUB
Total supply	15000
Initial issue amount	5000
Initial issue price	200
Chain	BNB Smart Chain

ERC20 token information: Issued within Q4 of 2022

(expected during the World Cup)

ERC-20 Token	
Name	PredictionClub Token
Symbol	PCT
Total Supply	1billion
Chain	BNB Smart Chain

Cross-chain plan (Q1 of 2023)	Ethereum, Arbitrum, Polygon
--	-----------------------------

Basic rules of ERC-20 Token:

1. NFT holders share a total of 60 million pieces of the market shares: released linearly for 10 years, that is, 16438.36 tokens a day. The allocation will be started from October 18, 2022;
2. The creator of the product will share a total of 100 million shares of the community: 10-year linear release on a monthly basis, starting from October 18, 2022, this quota is initially book-keeping, and will be locked after the ERC20 token is issued, with 180 days of lock-up, Users can claim at any time from December 2022;
3. product participants, share a total of 200 million community shares: 20 years of linear release on a monthly basis. Distribution will start in December 2022. Specifically, it will be distributed proportionally according to the user participation quota of the product that normally ends the month (regardless of the outcome) ;

Highlights and Opportunities

1. Across two popular tracks: NFT, PredictionMarket. So although it claims to be anonymous and non-profit, it is possible to quickly get institutional capital injection and grow rapidly;
2. Expectations of World Cup activities: The 2022 World Cup will be held in Qatar from November 20th to December 18th, and the world's largest carnival every four years will start! This is not only a grand event for fanatic fans, but also a carnival for betting enthusiasts. As a product spanning NFT and PredictionMarket, PCLUB can support football fans to predict the results of the game to a certain extent, so, although PCLUB declares that it does not support betting and betting on the ball, but objectively its function supports the guessing of the result of the ball game for the purpose of entertainment;
3. "Two-wheel drive" between non-fungible tokens and fungible tokens;

Competitive Analysis

At present, the PredictionMarket track in the blockchain industry has not yet started. The largest market share is "Polymarket" (<https://polymarket.com/>) running on the polygon chain. Its TVL has reached nearly 8 million USDT, but the lack of a token economic model makes it impossible to attract the community and users.

possible surprises

It is reported that the project party has hidden encrypted easter eggs in the first 5,000 NFTs, and will announce them within 2 months after the project is launched. At that time, the rules of easter eggs will be announced, and the owner will automatically receive USDT equivalent to 10 times when the NFT License is purchased. Currently The only hint given is related to the color of the NFT License.
